

Specification of subjects in doctoral studies

Subject code: ДМ1.5121А
Study program: Forestry – Submodule 1.5. Forest utilization with huting and wildlife protection
Type and level of studies: Doctoral studies
Subject name: Utilization of forests under special protection regime
Teacher (s): Milorad N. Danilović, DSc
Associates:
Subject type: elective
ECTS: 8
Condition: That the student graduated from undergraduate and master's degree studies.
Subject aim: The aim of the course is for students to acquire the basic and specialist knowledge in the field of felling and wood assortment processing as well as transport of wood assortments under the conditions of special forest protection schemes. Consistent with the regimes of protection, appropriate measures are required in the field of use of these forest complexes. These measures require the application of different (new or modified) technological procedures and solutions. The problem of selecting methods and technological procedures for the use of protected forest complexes due to their specificities, preparations for their implementation, as well as direct implementation, are the subject matter of the course Utilization of forests under special protection regime.
Subject outcomes: PhD students will be able to deal with problems related to the selection of optimum technologies in areas requiring a certain treatment from the aspect of their protection.
